

# 問題4

Fractional knapsack problem

## Exercises 15.2-6

- ◆ Show how to solve the fractional knapsack problem in  $O(n)$  time.

# Fractional knapsack problem

- ◆ 給定 $n$ 個不同物品，每個物品都有其重量(weight)、價值(value)。
- ◆ 現有一背包，其最大承重量 $W$ 。
- ◆ 問題: 要將哪些物品放入背包才能讓背包不超重又能有最大價值?
- ◆ (物品可以只取其一部分)

# Example

| Items  | a | b | c | d | e |
|--------|---|---|---|---|---|
| Value  | 4 | 2 | 7 | 8 | 3 |
| Weight | 1 | 2 | 3 | 4 | 5 |

$W(\text{capacity}): 8$

## Solution

- ◆將每個物品的價值( $v$ )除以其權重( $w$ )
- ◆依序挑選值權( $v/w$ )比最高的物品直到背包裝不下

# Solution

| Items  | a | b | c   | d   |
|--------|---|---|-----|-----|
| Value  | 4 | 2 | 7   | 8   |
| Weight | 1 | 2 | 3   | 5   |
| v/w    | 4 | 1 | 2.3 | 1.6 |

1. Take item a, space left: 7
2. Take item c, space left: 4
3. Take 4/5 of item d , space left: 0
4. Item taken: a, c, 4/5d. Total value: 17.4

## Problem

- ◆ The time taking step is the sorting of all items in decreasing order of their  $v/w$  ratio.
- ◆ The average time complexity of QuickSort is  $O(n \log n)$ .

# QuickSelect

- ◆ Based on QuickSort, but doesn't need to sort the entire array.
- ◆ Time complexity:  $O(n)$

# Time complexity

- ◆ Find the median item from  $\{v/ws\}$  ( $O(n)$ )
- ◆ See if you can fill the knapsack with items that are more valuable than the median ( $O(n)$ )
- ◆ If you can, do so and recursively solve the problem for the  $n/2$  items of lower value given that you've already filled the knapsack.
- ◆ If you can't, then you can throw out the  $n/2$  items of lower value, and then try to solve the problem again with only the  $n/2$  items of higher value.
- ◆  $T(n) = T(n/2) + O(n) = O(n)$

# Implementation

- ◇ Chose the median  $\mathbf{r}$  from  $\mathbf{R}$  (set of  $v/w$  ratios)
- ◇ Determine
  - ◇  $R1 = \{v/ws \text{ that are larger than } \mathbf{r}\}$ ,  $W1 = \text{sum of their weights}$
  - ◇  $R2 = \{v/ws \text{ that are equal to } \mathbf{r}\}$ ,  $W2 = \text{sum of their weights}$
  - ◇  $R3 = \{v/ws \text{ that are smaller than } \mathbf{r}\}$ ,  $W3 = \text{sum of their weights}$
- ◇ If  $W1 > W$ 
  - ◇ Recurse on  $R1$
- ◇ Else
  - ◇ While (knapsack isn't full and  $R2$  is not empty)
    - ◇ Add items from  $R2$
  - ◇ If (knapsack gets full)
    - ◇ Return items in  $R1$  and those just added from  $R2$
  - ◇ Else
    - ◇ Reduce  $W$  by  $W1+W2$
    - ◇ Recurse on  $R3$  and return items in  $R1$  and  $R2$
    - ◇ Add items returned from recursive call
